Salmonella spp	in 10g	not detected		OM	ISO 6579-1 : 2017-02

^{mv}) The limit of quantification/detection had to be increased, because the material had to be diluted due to its consistency.

Explanation: The symbol "<" or n.q. in the result column means, the parameter concerned is not quantifiable at the limit of quantification shown opposite.

The sign "<"...."(LOD)" or n.d. in column result means, the parameter concerned cannot be detected within the limit of detection.

Explanation: OM = on original matter; DM = on dry matter base

Norm modification

DIN EN ISO 6888-3 : 2005-07 (mod.): confirmation of coagulase reaction with Baird Parker rabbit plasma fibrinogen agar

According to the extent of the analysis the sample complies with the requirements of Commission Regulation (EU) 2023/915 of 25 April 2023 on maximum levels for certain contaminants in food, in version currently in force.

REPORT

Test report version **3**
Order **3726772**
Sample no. **854839 / 3**

Remark to Salmonella spp.:

In the testing of Salmonella spp. according to ISO 6579-1 Salmonella Typhi and Salmonella Paratyphi are not included. These bacteria/germs are hardly found in food. If on the side of the customer there is a justified case of suspicion these two subspecies can be analysed by a PCR test, which needs to be ordered separately by the customer.

Remarks

Marketability:

According to the type and scope of the tests described, the above-mentioned product submitted complies with the provisions of German food law and is to be regarded as marketable from the point of view of the German authorities.

Start of testing: 16.01.2026
End of testing: 27.01.2026

*The results are related only to the samples tested. In cases where the laboratory has not been responsible for sampling, the reported results apply to the samples as received. The laboratory is not responsible for the information provided by the customer. The customer information, if any, presented in this test report is not subject to the accreditation of the laboratory and may affect the validity of the test results. Duplication of this document or of parts of it requires the authorization from laboratory.
In conformity assessment, the economic approach is used as the decision rule (a non-conformity exists if the measurement result is included measurement uncertainty above the specification or standard), as long as nothing else has been determined by corresponding legal or normative bases.*
